The online shopping system is used to reduce the time and effort required for normal shopping.

It helps in managing orders, customers, shopping carts, admins etc.

- The system is used by a user who can be an admin session manager customer
- The admin handles actions like create and delete departments and categorize of products, can view the catalog details and update new product details in existing ones and can also manage customers
- The customers can register and login to the system he/she can buy products by searching and also update their profiles
- A shopping cart features exists which lists all the products a customer intends to try.
- The various orders can be placed in the system by giving relevant order details.
- There exist different departments which contain various categories of products and their info.

→ Once an order is placed, the shipping info of the product, delivery to customer.
